Report from Stefan Gruner, 4.2.2011:

Due to lack of student-support, the project has been sleeping since my previous report. Better news: Since December 2010, I have found two new postgraduate students who want to bring the project further where the previous students had left it. One of the students is working particularly on the logical consistency constraints which must hold for the various inter-entity relations in the meta-model, whereas the other student is assigned with the continuing programming-work towards a demonstrate-able CASE tool prototype in which those rules are implemented. Sorry for the slow progress and for the shortage of intermediate results, but, as mentioned above, the project is still alive.

Best regards,
Stefan
